## Eye-LINKS

Update your graphical object keys with existing data from an attached database.

Whether it's lamp post identifier's, land parcel toids or public footpaths, Eye-LINKS enables you to update the graphical keys by simply highlighting the field in the attribute database and clicking on the map object.

Eye-LINKS provides two modes of operation.

- Supervised mode prompts the user before each object is re-keyed
- Automatic mode, simply re-keys without the confirmation prompt.

## Eye-LINKS Professional

Eye-LINKS Professional provides the same update facilities as Eye-LINKS but with the added ability to delete graphical objects and associated database records.

Both Eye-LINKS and Eye-LINKS Professional are available for Autodesk MapGuide.

Registered at
