

Training: Autodesk MapGuide for Document Management

Many organisations have a wealth of information held in a wide variety of documents, images, spreadsheets. It is often difficult to collate this information into an easily accessible environment enabling users to access the data when necessary. Imagine being able to access all the site survey reports for a particular development. Or view the time series photographs of tree surgery. By attaching the various documents to an object on a map/drawing, any number of written or scanned reports, survey drawings, word processed documents, photographs etc can be displayed by way of a simple report.

Eye-DOCS presents the relevant documents to the user enabling efficient recall of information and better informed decisions.

Workshop Description

This workshop is designed to introduce you to the Eye-DOCS application and to teach you how to use Autodesk MapGuide technology for document archive, management and retrieval purposes. We will also explain how to integrate many common file formats including DWG, DWF, MS Office files and digital media etc.

Objectives

The objective of the Workshop is to provide you with the skills to understand how to attach documents and photographs to existing map objects and to geo-code your address database.

All delegates will receive a sample Autodesk MapGuide data package used during the workshop. The package contains building (polygon), road (line) and tree (point) data layers, geographically linked to the sample document database and web pages (ie. reports). Delegates will also receive a discount voucher for the Eye-DOCS application (Terms and conditions apply)

Who should attend

Anyone responsible for multiple documents in various formats, or who would like to access this information in a simple but effective web format.

Prerequisites

Basic IT skills are preferable. A working knowledge of Autodesk MapGuide would be advantageous but is not essential.

Course Synopsis

Release the power of databases

- Ø Provide you with numerous tips and tricks to use database technology to pull together your drawings and documents into an integrated environment without the need for programming.

Upload & Deploy

- Ø Demonstrate how the Eye-DOCS application easily uploads images and documents to your file / web server.

Implementation

- Ø Understand the ease with which Eye-DOCS can be implemented.

Intelligent Tooltips

- Ø Explain how to use database information in a tooltip
- Ø Expand the use of tooltips across multiple data layers & data joins to include the information required
- Ø Explain how to display building front elevation in a tooltip
