Article -The Landscaper Tree Health

Eye to the ground with Tree Management

With the destructive weather patterns and resulting change in environment experienced recently, a greater awareness is required by estates and organisations for the condition of their trees, shrubs, land and non-living assets.

With insurance, duty of care, inspection demands, etc., resulting from these weather events, coupled with, diseases such as Acute Oak Decline, Chalara fraxinea, P.ramorum to name but a few, AIT Spatial Ltd's range of cost effective, simple to use, customisable solutions for Tree, Land, Estate, Housing and Asset Management are designed to cover your continually expanding needs.

Our specialised range of solutions utilise the same core technology, with Eye-TREE for tree and plant management, Eye-TREE Lite and Eye-WALKS to enhance your visitors experience. Non-living assets are managed with Eye-ASSET and Eye-SPACE(BIM).

In most cases your existing records/data, both digital and paper based can be incorporated into the Eye range of interactive mapping software. The password protection ensures security and the option of on-site or hosted versions means you do not require the overheads of complex IT.   A web browser is all you need.

These solutions provide you with a platform to ensure your obligations are met and the ability to advance your business and increase the workflow of information to land owners, consultants/contractors and the general public.

Our aim at AIT Spatial is to make information and geography work for you.

For more information contact Mark Spence on info@aitspatial.co.uk, or 01462 816648, or visit www.aitspatial.co.uk.
